

CODE: ZEROEMOT

Project Requirements

- Development Platform
 - PHP 5.3
 - My SQL 5.1
 - Apache HTTP Server 2.2
 - Codeigniter MVC Framework (codeigniter.com)
 - Modular & Template Architecture: open-blog.info
 - JQuery, Mootools, Prototype / Scriptaculous

Project Requirements

- User Interface
 - Simplistic yet rich web 2.0 layout
 - Extensible CSS Templates
 - Extensive AJAX showcasing freshness of technology
 - Extensible sidebar architecture
 - Real-time on-page updates
 - Browser support: IE 6+, Firefox, Chrome, Opera, Safari
 - References
 - [Twitter.com](#)
 - [Orkut.com](#)
 - [Wakoopa.com](#)

Scope of Work

- Frontend / UI Development
 - Graphic theme
 - Home / Login Page
 - Registration Page
 - Followers / Following Page
 - Forgot Password Page
 - Profile Page - View (Self, Friends, Others) / Edit (Self)
 - Add Friend
 - Search Page
 - Search Result Page
 - Settings Page
 - Data Entry Page
 - Result Page
 - Today Page: Snapshot
 - Today Page: Updates

Dev - Login Page

- Extremely lightweight and simple
- Something very similar to [twitter.com](https://twitter.com/login) login page

Dev - Registration Page

- Single-step registration
- Required features:
 - Real-time username check (refer twitter.com registration page)
 - Location selector
 - Option A: Auto-suggest city selector
 - Option B: Dependent Ajax dropdown
 - On-page validation
 - Verification Email
 - CAPTCHA

Dev – View / Edit Profile

- Similar to twitter.com tabbed interface
- Photo upload / crop

Dev – Data Entry Page

- 2-column layout
- Uncomplicated 5-field input page

Scope simplified

- A navigational prototype with limited backend interaction
- Frontend development with placeholders to host data coming from database
- End-to-end backend development not required
- Develop only that what is required to test out effects such as Ajax functionality, e.g. pagination, auto-suggest, real-time username check
- Graphics: CSS Templates, Icons
