Getting the most from therapy sessions

Engagement and outcomes

- 39% reduction vs 30%
- 10 weeks vs 16 weeks to get 30% reduction

The relationship between 'digital' engagement & outcomes

HelloSelf

Experience on Income Protection claims

Case Study X

Referred to HelloSelf in December; initiated an income protection claim and offered the service.

Received 8 sessions; applied for a further 6 sessions = **14 sessions in total** from December to April

X had been signed off sick from work with a diagnosis of Depression from GP.

Presented with: Depression, hopelessness, active suicidal ideation, loss of confidence, anxiety, fear of a return to work, isolated and lack of social interactions (due to COVID restrictions).

Sessions 1 - 4; significant risk of suicide, liaison with GP, focus on Behavioural Activation and Social Engagement. *Severe distress, severe depression, severe anxiety.*

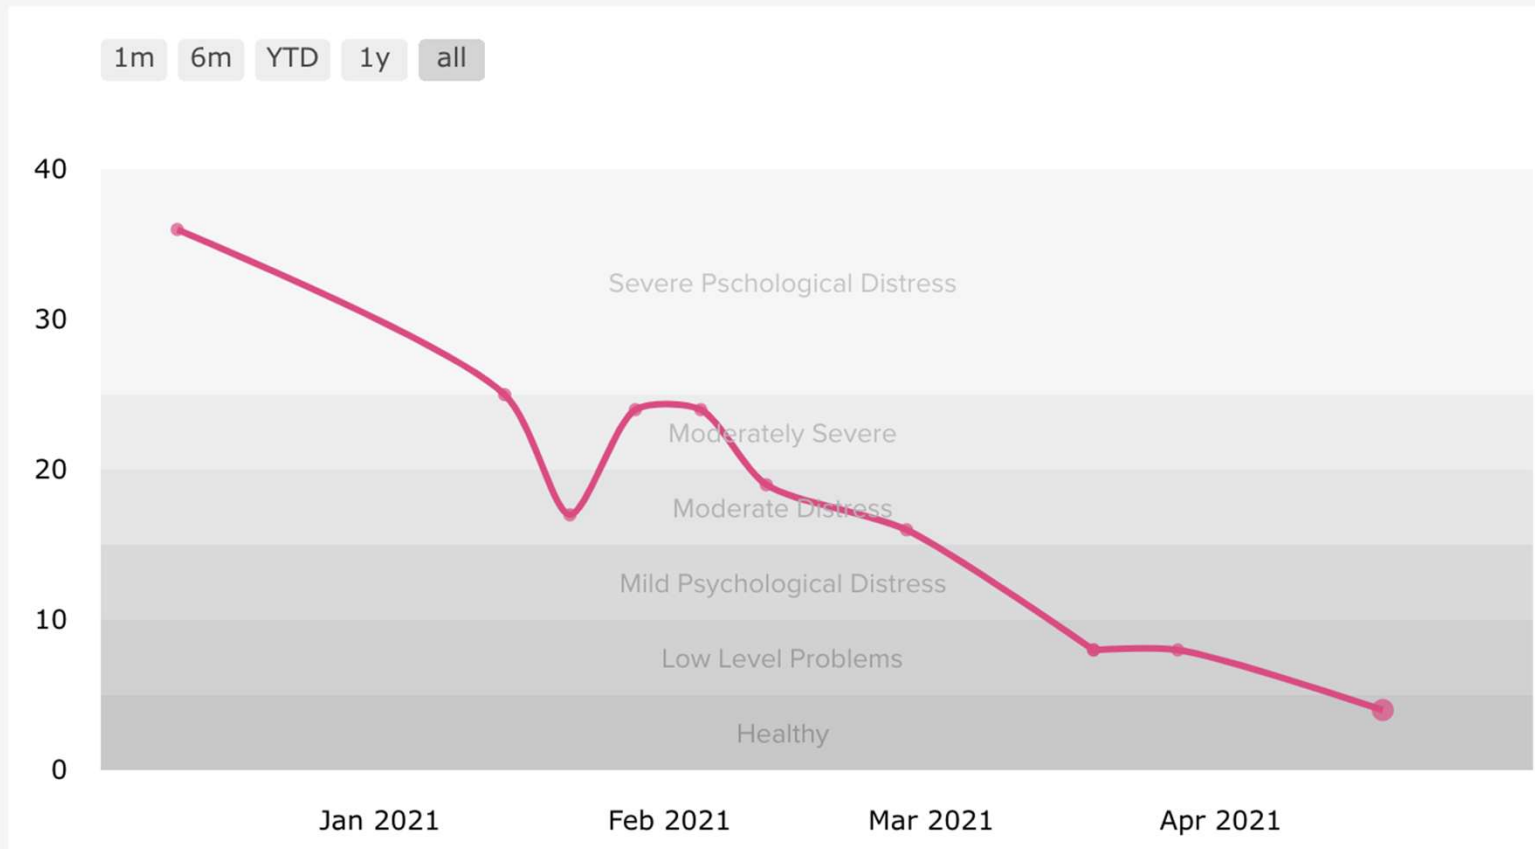

Treatment: goal setting, beliefs about self and cognitive challenging, sense of identity, building confidence, increase self-care and housework, develop routine and sense of purpose, tackle fears and understand depression.

By session 12; had found and started a new job.

By session 14; treatment concluded; *Healthy, minimal/no depression, minimal/no anxiety.* Still has access to session recordings and activities in order to maintain wellness and prevent relapse.
