

Rehabilitation Case Managers
£Flexible depending on experience
Eastleigh

An exciting opportunity has arisen to join our rapidly expanding team of Rehabilitation Case Managers (RCMs) in the Aviva Rehabilitation Service Centre.

The Service Centre supports different product lines, but is primarily focussed on supporting customers with Income Protection policies. The objective of our intervention, in all cases, is to support our clients with appropriate early intervention and successful return to work (RTW) outcomes.

You will ideally have experience in RTW RCM, or vocational rehabilitation, but more essentially, have the ability to identify the necessary stakeholders for a successful RTW plan, and be able to facilitate successful RTW outcomes through effective co-ordination of all clinical and support services required. Support will be provided by the Aviva clinical team, vocational rehabilitation consultants, and claims assessors, through regular case meetings.

You will be expected to develop a strong and consistent working relationship with corporate clients through regular telephonic, email and face to face support on specific cases, and through implementation & review meetings with groups in your own client portfolio.

A Vocational Rehabilitation qualification such as the CDMP and/or a clinical qualification would be advantageous but are not essential.

Product and systems specific training will be provided on a 1:1 basis in the workplace, during your induction, as required, depending on your level of experience. We are committed to training and development and actively promote further training and CPD, specific to the operational and business needs of the team.

Essential knowledge / skills:

- Experience providing RTW specific rehabilitation case management.
- Experience working with a rehabilitation provider, within an insurance setting or in Occupational Health.
- Knowledge of the industry (Income Protection/Permanent Health Insurance/Disability Claims/Group Risk/Critical Illness).
- Good planning, negotiation and organisational/time management skills.
- Competent in problem solving and decision making. Able to confidently convey rehabilitation decisions and to discuss these in detail with demanding clients.
- Ability to work as an independent practitioner within the rehabilitation team.
- An understanding of how bio-psychosocial issues might influence the course of a claim and RTW.

Desirable knowledge / skills:

Appropriate training and experience in Vocational Rehabilitation or in a relevant clinical discipline (e.g. Occupational Therapy, Physiotherapy, Psychology, OHA) would be desirable but not essential.
