

Benefits of attending Assessing and Managing Medical Risk for Insurers

Open for Business

- ▶ Use of real case studies ensures that delegates can immediately see how their learning will impact on their work
- ▶ Practicing clinicians and experts in their field to ensure you always get the most up to date information and developments
- ▶ Each module is accredited by Cardiff University
- ▶ Blended approach ensures flexibility and minimal impact on delegate's day to day role

As a direct result of the course, previous attendees have noted:

- ▶ A huge decrease in CMO referrals per month, resulting in significant cost savings;
- ▶ A reduction in errors and improved quality in decisions;
- ▶ Quicker decision making, thus improved customer service;
- ▶ Increased delegate confidence;
- ▶ Increased confidence from reinsurers, allowing more favourable terms to be negotiated;
- ▶ Improved knowledge being passed on to other staff

“ This is a unique blended learning experience with pre-course on-line materials setting the scene, and a comprehensive two day face-to-face seminar with access to specialists ”

Assessing and Managing Medical Risk for Insurers

A unique blended learning course, designed to improve understanding of medical conditions and their implications on underwriting and claims processing.

Assessing and Managing Medical Risk for Insurers

Our range of 'Assessing and Managing Medical Risk for Insurers' courses aim to provide delegates with knowledge and understanding about a range of medical conditions frequently encountered in medical underwriting and claims, and to improve and facilitate their risk assessing performance for these key medical conditions.

Recommended for Underwriters and Claims Assessors with at least 3 years experience, each module is designed to improve delegates understanding of specific medical conditions and their implications on medical underwriting and claims processing.

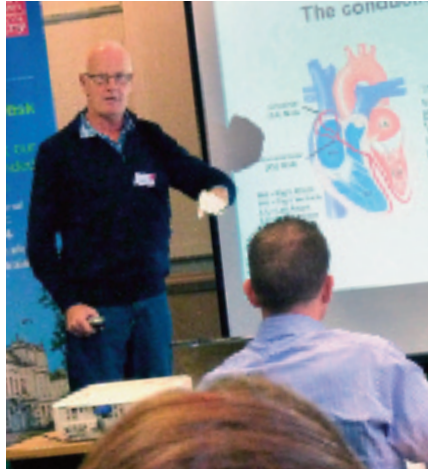

Delivery

The modules adopt a blended learning approach:

- ▶ Around 15-20 hours of online study
- ▶ 2 face to face days of presentations and workshops.

Online materials will be available 6 weeks prior to the face to face sessions and will include presentations, videos, reading, interactive sessions and case studies for each topic.

During the face to face sessions, delegates will have the opportunity to discuss medical conditions and cases with practicing clinicians and experts in their field.

“ The workshops were excellent, as it's really important for underwriters to understand how to apply the knowledge learnt to actual cases. **”**

The workshops will be highly practical, using real life examples and industry case studies to aid discussions focussed on underwriting and claims covering all lines of business including life, critical illness and income protection.

What will be covered

Each course will cover the symptoms, diagnosis, treatment, and prognosis for each topic, as well as the issues these present for underwriting and claims management.

The online study will also include an introduction to basic anatomy, physiology and medical investigations to ensure a basic level of knowledge before commencing with condition specific materials. This will be common to all modules, and need only be completed once.

Courses scheduled for 2012 are:

Oncology Musculoskeletal and Illness Perceptions

- ▶ Online Material Available: 30 July 2012
- ▶ Face to Face Days: 12 & 13 September 2012
Cardiff University

Cardiology Diabetes Neurology Mental Health
