Health Claims Forum

16 November 2006

Improving customer service,
reducing costs,
managing fraud risk

CAPITA

Advanced Validation Services Overview

An **empowered solution** for validating the truth

Combining the technology of the most sophisticated and unique voice-risk analyser (VRA) on the market with powerful behavioural analysis and conversation management techniques that **together** enable the accurate detection of truthful statements

Over 30 key signposts to truth and deception

Within a matter of minutes:

- **Identifying and processing genuine cases**
- **Identifying potential risk and deception**
- **Saving time & money**

Advanced Validation Solution Introduction

Our Aims :

- 1 Improve customer service**
- 2 Reduce operating costs**
- 3 Reduce claims payments**

Fast-track the genuine

Reduce handling times & costs

Identify risk & manage away

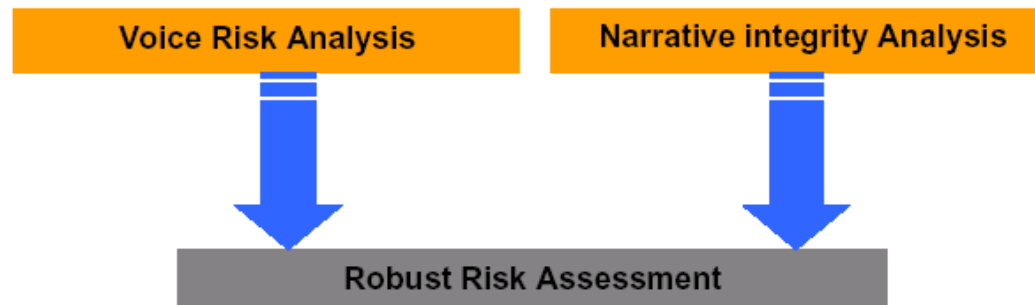

Reduce fees on investigation

Advanced Validation Solution Benefits

Business Benefit	Result
Customer service	- Complaints ratio less than 1% 70% claims fast-tracked - Customer-friendly process
Reduced operating expenses	- Evidence of at least 33% reduction in handling time 19% reduction in expenditure on field investigations - Ability to streamline process for genuine
Reduced fraud	£10 million saving on 16,000 cases for one client - HBOS announced 6 fold increase in fraud savings since AVS - Detection rate increased from 1% to 18%
Improved staff morale and retention	- Staff turnover reduced from 33% to 9% - A more empowered and interesting role for staff
Business transformation	A catalyst for process re-engineering and managed change, creating streamlined and efficient operations

Advanced Validation Solution

A dual approach

Dual Approach

The most important element in the Advanced Validation Solution is the handler. It is they who undertake the Narrative Integrity Analysis and judge the relevance of risks identified by the technology.

Handlers are trained to make an objective decision based on the dual outcome of both elements of the process, using a scoring system agreed with each client in advance.

The handler is entirely responsible for the overall assessment of risk

Advanced Validation Solution Empowering handlers

Four empowering techniques to maintain control and assess risk

- Advanced Questioning Techniques
- Conversation Management
- Narrative Integrity Analysis
- Applied Psychology

Advanced Validation Solution

Voice Risk Analysis

Instant, accurate and objective risk assessment

- Unique and powerful technology
- Calibrates for each customer
- Measures micro-changes in voice frequencies related to emotion, cognitive conflict, stress, etc.
- Compares changes in frequencies against calibrated truth baseline
- Delivers real-time risk indication to handler

CAPITA

Advanced Validation Solution

An integrated service

AVS can deliver an integrated process for dealing with high risk cases

SCREENING

Identify the genuine

- Initial call with structured, bespoke script
- Trained handlers assess risk
- Rapid decision according to client agreed criteria
- Fast-track settlement for low risk cases
- Referral to secondary process for high risk cases

INTERVIEW

Confirm the risk

- High Risk cases only
- Experienced technician assesses robustness of original risk evaluation
- Not scripted
- Return to fast-track for cases reassessed as low risk
- Focuses in on precise areas of concern
- Seeks to manage away high risk cases

INVESTIGATION

Manage out / deny

- Only High Risk cases not already managed away
- Focus on precise areas of concern highlighted by AVS
- Focused investigation based on known risk areas using desk and/ or field enquiries
- Defensible evidence
- Manage away fraudulent claims
