

Health Claims Forum

Thursday 27 February 2020

Registration from 9.30am for 10am start; meeting will close at 4pm

20:20 Claims Assessment

**A closer look at the changing landscape of genomics,
the legal environment and claims assessor bias
in the world of Claims**

Who better to start the day than **Richard Buttle, Swiss Re**, reflecting on the changes to **suicide verdicts** following a lowering in the standard of proof; his views on **assisted suicide** as we move into a new decade and how we deal with **unlawful killings and more**.

We're delighted that **Professor Dame Sue Hill, Chief Scientific Officer for England**, will be joining us to talk about **genomics - the journey and the future**. It's less than 20 years since the first genetic code of a human being (their genome) was published, but the UK has been world leading in its development and application. The 100,000 genomes project, launched in 2012, has been instrumental in the creation of **a new genomic medicine service for the NHS** – Professor Hill will tell us about how genomics is transforming the way people are cared for and bringing advanced diagnosis and personalised treatments to all those who need them.

Continuing the theme of genomics and genetics will be **Dr Tazeen Ashraf, Clinical Genetic Specialist Registrar at Guys and St Thomas'**. Now the scene has been set, we'll take a closer look at **genetics and genomics in a typical hospital setting**. What are the differences between genetic testing and screening, and how and when do these take place? We'll delve into some of the more common terminology – like the differences between congenital, familial and hereditary. As well as hearing views on the possible impact private testing might have on the NHS.

To end the day we've invited **Marisa Knowles, from People Untapped** who'll challenge us to ask the question, **am I unconsciously biased?** Like it or not, unconscious bias is part of who we all are and will influence our interactions and decisions as claims assessors...to some extent. The impact of which can be positive or negative! It's important for our customers and companies that we are aware of any **potential pitfalls** associated with these biases. This session will help to unearth our own biases and look at **strategies to counter the downsides**. We'll be using claims case studies to illustrate potential bias at play.

**We really hope you'll be able to join us.
Remember, fees are now just £100 per delegate!**
